1. Production description

EP-261B is an embedded panel printer unit, which can print two versions of thermal receipt and thermal label. The body has small weight, high durability, and long printing time. It is widely used in medical equipment, measuring equipment, and weighing instruments. , Safety equipment and analytical instruments and meters.

2. Production featurer

- ※ Smart appearance
- ※ Easy paper loading
- ※ Low noise thermal printing
- ※ Different interfaces optional
- ※ Front panel make paper replacement easily
- ※ Support graphic and text printing
- ※ Support 60 mm diameter paper roll
- ※ Easily embedded to any kinds of instruments and meters

3. Size specification

Suggested installing size:

建议安装尺寸 $(90.4 \pm 0.2) \times (96.8 \pm 0.2)$

4. Installation method

- ① to insert the printer from the front of the installed machine
- ② after loading, open the paper bin cover, both sides of the screws locked can be fixed.

Note: The installation of the Panel can be adapted from 1 to 6mm thickness changes.

5. Performance parameters

Model		EP-261B
Printing	Print method	Thermal-line dot method
	Print speed	Max:70mm/s
	Resolution	203dpi(8dots/mm)
	Effective printing width	48mm
Character	Character set	ASCII, GBK, BIG5 and so on
	Print font	ANK: (9*17,12*24) Chinese: (24*24)
Paper	Paper type	Thermal paper,label paper,black mark paper
	Paper width	57.5±0.5mm
	Max paper roll diameter	Max:60mm
	Paper thickness	Thermal Receipt:0.06-0.09mm; Thermal Label: 0.12-0.14mm
Head temperature detection		Thermistor
No Paper detection		Photoelectric detection
Axis in-position detection		Mechanical switch
Label Printing		Label space detection
Baudrate		9600bps-115200bps
Interface		RS232/TTL+USB/DK optional
Print commands		Compatibel with ESC/ POS commands
Physical	Outline dimension	96.1(L)*102.5(W)*70(H)mm
	installation port size	90.4*96.8mm
	Insert size	>67.5mm
	Color	Black

Power supply		DC6.5V-9V/12V optional, Average current:2A, Peak current 4A
Environment	Operating temperature	0°C~50°C
	Operating humidity	20%~85%
	Storage temperature	-20°C~60°C
	Storage humidity	5%~90%

6. Paper Roll Installation

1. Open the lid of the printer;
2. The paper rolls on the opposite side upward and then put into the roll groove;
3. Cover the printer lid and let the paper be slightly exposed.

Note: Before installing the paper, please tear the adhesive paper on the roll and remove the foreign object to protect the print head.

7. Interface and define

DRAWER (XH2.54mm/2Pin)

No.	Pin	Introduction
1	VH	power supply
2	DRAWER	DK

POWER (XH2.54mm/3Pin)

No.	Pin	Introduction
1	VH	power supply
2	Null	/
3	GND	Ground

RS232/TTL (XH2.54mm/4Pin)

No.	Pin	Introduction
1	DTR	Data Terminal Ready
2	TXD	Transmit Data
3	RXD	Receive Data
4	GND	Ground

USB (MH2.00mm/4Pin)

No.	Pin	Introduction
1	VUSB	+5V power supply
2	D-	Differential Data Input/Output D-
3	D+	Differential Data Input/Output D+
4	GND	Ground

8. Basic usage

8.1 Print self-test page

Method One: under the shutdown state, hold down the FEED key, boot up, and print out a self-test page, which contains serial transmission rate, language and other Information.

Method Two: when the printer power is on, please long-press the test key about 2s, then it will print the self-test page.

8.2 Panel LED Tips

The printer has two LEDS to prompt the state of the user's printer, two LEDS are power supply indicator (green light), and status indicator (red light)

POWER indicator	ERROR indicator	Printer status
Keep bright	Light off	Working properly
Keep bright	Flash 2 times	Printer head is not connected
Keep bright	Flash 3 times	No paper
Keep bright	Flash 5 times	Printer head over heating
Keep bright	Flash 6 times	Opening the cover

9. Command Introduction

9.1 Command List

LF	Line feed	Printing and paper feed commands
CR	Enter	
ESC J	Print and paper feed n dots	
ESC d	Print and paper feed n lines	
ESC 3	Set line space n dots	Printing set commands
ESC 2	Set default line space	
ESC \$	Set print position	
GS L nL nH	Set left margin amount	
ESC !	Set character printing method	
GS ! n	Set character size	
GS B n	Set and delete white printing	
ESC - n	Set and delete underline	
ESC V n	Set and delete 90°rotate printing	
ESC a	Set printing alignment	
FS &	Set Chinese mode	
FS .	Exit Chinese character mode	
ESC % n	Select、cancel user customized characters	
ESC &	Define user customized characters	
ESC ? n	Cancel user customized characters	
ESC R n	Selecting international character set	
ESC t n	Select character code	

ESC *	Fill Graphics vertical module data	Graphic printing command	
GS v 0	Print Graphics horizontal module data		
GS *	Define downloaded bitmap		
GS / m	Print downloaded bitmap		
FS q	Define NV bitmap		
FS p n m	Print NV bitmap		
HT	Horizontal tab	Tab Commands	
ESC D	Horizontal tab position setting		
GS H	1D bar code readable character(HRI) print position setting	One-dimension bar code command	
GS h	1D bar code height setting		
GS w	1D bar code width setting		
GS k	1D bar code printing		
GS (k	Printing QR code	Printing QR code	
GS r n	Transmission status	Status querying Commands	
DLE EOT n	Real-time transmission status		
ESC @	Printer reset	Other commands	
DC2 T	Print self-test page		
SO	Feed to the beginning of the next label		
US A n	Setting up paper type		

9.2 Commands details

①Printing and paper feed commands

Printing and paper feed

Name	print and paper feed
Code	ASCII : LF DEC : 10 HEX : 0A
Function	Print the buffer contest,and set the paper feed as per line space,then adjust print position to initial position at the next line.
Range	None
Default	None
Supported mode	All
Notes	None
Example	None

Enter

Name	Enter
Code	ASCII : CR DEC : 13 HEX : 0D
Function	Adjust print position to initial position of the same line.

Range	None
Default	None
Supported mode	All
Notes	After executing, R command, the new printing data will cover old data in the printing buffer.
Example	None

Print and paper feed dots

Name	Print and paper feed n dots
Code	ASCII : ESC J n DEC : 27 74 n HEX : 1B 4A n
Function	Print the buffer content and paper feed
Range	$0 \leq n \leq 255$
Default	None
Supported mode	All
Notes	Paper feed n dots when printing buffer is empty. After executing this command, printing position is moved to initial
Example	1b 40 30 31 32 1b 4a 10

Print and paper feed n line

Name	Print and paper feed n lines
Code	ASCII : ESC d n DEC : 27 100 n HEX : 1B 64 n
Function	Print the contents in printing buffer and paper feed n lines.
Range	$0 \leq n \leq 255$
Default	None
Supported mode	All
Notes	Print this command set as initial position of the same line
Example	1b 40 30 31 32 1b 64 01

②Printing set commands

Set line space as n dots

Name	Set line space as n dots
Code	ASCII : ESC 3 n DEC : 27 51 n HEX : 1B 33 n

Function	Set line space as n dots
Range	$0 \leq n \leq 255$
Default	$n = 33$
Supported mode	All
Notes	Line space as below:  If the line space setted is less than the highest character in that line, then this line space is equal to the height of the highest character. If ESC2, ESC@, reset the printer, the printer blackout, and the line space turns to default.
Example	<pre>1b 40 1b 33 30 30 31 32 0d 0a 30 31 32 0d 0a 1b 32 30 31 32 0d 0a 30 31 32 0d 0a</pre>

Set line space to default

Name	Set line space to default
Code	ASCII : ESC 2 DEC : 27 50 HEX : 1B 32
Function	Set line space to default 33 dots
Range	None
Default	None
Supported model	All
Notes	Line space in details pls check ESC 3 command. If the line space setted is less than the height character in the line, the line space of this line is equal to the height of the highest character It can use ESC 3 to define line space.
Example	None

Set print position

Name	Set print position
Code	ASCII : ESC \$ nL nH DEC : 27 36 nL nH

	HEX : 1B 24 nL nH
Function	Set left side blank area as (nL + nH × 256) dots
Range	0 ≤ nL ≤ 255 0 ≤ nH ≤ 255
Default	None
Supported mode	All
Notes	This command is only valid for this line, and the printing position is reset to the printing start position after line feed If it exceeds the printing range, move to the next line for printing
Example	1b 40 1b 24 08 00 30 31 32 0d 0a 30 31 32 0d 0a

Set the left margin

Name	Set the left margin
Code	ASCII : GS L nL nH DEC : 29 76 nL nH HEX : 1D 4C nL nH
Function	Set the left margin as (nL + nH × 256) dots
Range	0 ≤ nL ≤ 255, 0 ≤ nH ≤ 255
Default	None
Support Model	All
Notes	This command is only effective with the initial position of the line. The illustration is as follows:  Use the maximum value of the printable unit, if the setting is beyond the printable area.
Example	1b 40 1d 4c 08 00 30 31 32 0d 0a 30 31 32 0d 0a

Set character printing method

Name	Set character printing method
Code	ASCII : ESC ! n DEC : 27 33 n HEX : 1B 21 n

Function	Set character printing methods (font,highlight,inversion,bold,double hight,double width and underline),parameter n bit definition as below:		
	Bit Function	Value	
		0	1
	0 Font	Normal	Small character
	1 Undefined		
	2 Undefined		
	3 Bold	Cancel	Setting
	4 Double hight	Cancel	Setting
	5 Double width	Cancel	Setting
Example	6 Undefined		
	7 Underline	Cancel	Setting
	None		
	n = 0		
	All		
	The command is effective with Chinese and foreign languages. The command is disabled when ESC@, printer reset or power off		
	1B 40 1B 21 01 30 31 32 0D 0A		
	1B 40 1B 21 02 30 31 32 0D 0A		
	1B 40 1B 21 04 30 31 32 0D 0A		
	1B 40 1B 21 08 30 31 32 0D 0A		
	1B 40 1B 21 10 30 31 32 0D 0A		
	1B 40 1B 21 20 30 31 32 0D 0A		
	1B 40 1B 21 40 30 31 32 0D 0A		
	1B 40 1B 21 80 30 31 32 0D 0A		

Set character size

Name	Set character size
Code	ASCII : GS ! n DEC : 29 33 n HEX : 1d 21 n
Function	Set character size as 1-8 times width,1-8 times height. Definition is as below: Use 0-3 set character height 4 - 7 bits set character width show as below: Chart 1 Character width setting Chart 2 Character height setting

	HEX	DEC	width	HEX	DEC	height
	00	0	1(Normal)	00	0	1(Normal)
	10	16	2(double width)	01	1	2(double height)
	20	32	3	02	2	3
	30	48	4	03	3	4
	40	64	5	04	4	5
	50	80	6	05	5	6
	60	96	7	06	6	7
	70	112	8	07	7	8
Range	None					
Default	n = 0					
Support Model	All					
Notes	This command is effective with Chinese and other foreign languages, except for HRI character. The command setting is disable when ESC@, printer reset or power off.					
Example	<pre>1b 40 1d 21 11 30 31 32 0d 0a 30 31 32 0d 0a</pre>					

Set、remove white printing

Name	Set、 remove white printing
Code	ASCII : GS B n DEC : 29 66 n HEX : 1d 42 n
Function	Set and remove white printing When the LSB of n is 0,white printing mode is off. When the LSB of n is 1,white printing mode is on.
Range	None
Default	n = 0
Support Model	All
Notes	It is only effective for LSB of n. This command is all effective with built-in characters and user-defined characters. It is effective with blank,which is setted by ESC CP,when white printing mode is on. This command is not effective with bitmap, user-defined bitmap, barcode, HRI character and vaulting space of HT,ESC \$. This command is not effective with line space. The white printing mode is prior to underline mode. When it is white printing mode, even underline mode is open, which can also be

	forbidden.(But it not be canceled). This command is disabled when ESC@, printer reset or power off.
Example	1b 40 1d 42 01 30 31 32 0d 0a 30 31 32 0d 0a

Set、remove underline

Name	Set、 remove underline								
Code	ASCII : ESC - n DEC : 27 45 n HEX : 1B 2D n								
Function	Set / remove underline mode,based on the value of n as follow: <table border="1"> <thead> <tr> <th>n</th><th>Functions</th></tr> </thead> <tbody> <tr> <td>0, 48</td><td>Remove underline mode</td></tr> <tr> <td>1, 49</td><td>Set underline mode(1 dot coarse)</td></tr> <tr> <td>2, 50</td><td>Set underline mode(2 dot coarse)</td></tr> </tbody> </table>	n	Functions	0, 48	Remove underline mode	1, 49	Set underline mode(1 dot coarse)	2, 50	Set underline mode(2 dot coarse)
n	Functions								
0, 48	Remove underline mode								
1, 49	Set underline mode(1 dot coarse)								
2, 50	Set underline mode(2 dot coarse)								
Range	$0 \leq n \leq 2, 48 \leq n \leq 50$								
Default	n = 0								
Support Model	All								
Notes	Printer can print underline for all characters(including the space to the right of the character), except for the space set by HT. Printer can not print underline for clockwise rotated 90 ° characters and white printing characters. When n is setted as 0 or 48,remove underline mode.Other data is not printed as underline,and the setted underline coarseness does not change before removing underline mode.The default underline coarseness is 1 dot. It is not effective with underline coarseness to change character size. Using ESC! can also set and remove underline mode.However be aware that the last received command must be effective.								
Example	1b 40 1b 2d 01 30 31 32 0d 0a 1b 40 1b 2d 02 30 31 32 0d 0a 1b 40 1b 2d 00 30 31 32 0d 0a								

Set、remove 90°revolving printing

Name	Set 、 remove 90°revolving printing
Code	ASCII : ESC V n DEC : 27 86 n

	HEX : 1B 56 n
Function	Set or remove 90° revolving printing When n is equal to 0 or 48, remove 90° revolving printing. When n is equal to 1 or 49, set 90° revolving printing.
Range	$0 \leq n \leq 1$, $48 \leq n \leq 49$
Default	n = 0
Support Model	All
Notes	When it is setted to underline mode, the printer is not underlined for characters rotated 90°. In the 90° rotation mode, the multiplier and double width commands magnify the character in the opposite direction to the multiplier command in the normal mode. When ESC @, printer reset, power off, the setting of this instruction is invalid.
Example	1b 40 1b 56 01 30 31 32 0d 0a 30 31 32 0d 0a

Set printing alignment

Name	Set print alignment (Left, middle, right)
Code	ASCII : ESC a n DEC : 27 97 n HEX : 1B 61 n
Function	Align all data in one line, the meaning of n value as below: n mode 0, 48 left 1, 49 middle 2, 50 right
Range	$0 \leq n \leq 2$ or $48 \leq n \leq 50$
Default	n = 0
Support Model	All
Notes	This command setting is disabled when ESC @, printer resets or power off.
Example	1B 40 1B 61 02 30 31 32 0D 0A 1B 40 1B 61 01 30 31 32 0D 0A 1B 40 1B 61 00 30 31 32 0D 0A

Set Chinese mode

Name	Set Chinese mode
Code	ASCII : FS & DEC : 28 38 HEX : 1C 26
Function	Set Chinese mode
Range	None
Default	None
Support Model	All
Notes	When the Chinese character mode is selected, the printer processes all Chinese character codes(ASCII code) , two bytes at a time. The Chinese character code(ASCII code) is processed in the order of the first byte and the second byte.
Example	1b 40 1C 26 B0 AE C9 CF D7 D4 BC BA 0d 0a 1C 2E B0 AE C9 CF D7 D4 BC BA 0d 0a

Exit Chinese character mode

Name	Exit Chinese character mode
Code	ASCII : FS . DEC : 28 46 HEX : 1C 2E
Function	Exit Chinese character mode, cancel Chinese character mode
Range	None
Default	None
Support Model	All
Notes	When the Chinese character mode is not selected, all character codes are regarded as ASCII codes, and one character at a time is processed.
Example	None

Select, cancel user customized characters

Name	Select 、cancel user customized characters
Code	ASCII : ESC % n DEC : 27 37 n HEX : 1B 25 n
Function	Select 、cancel user customized characters When n LSB is 0, delete customized characters When n LSB is 1, select customized characters
Range	$0 \leq n \leq 255$
Default	0
Support Model	All
Notes	When cancel customized characters , automatically select the internal

	character set.
Example	None

Define user customized characters

Name	Define user customized characters
Code	ASCII : ESC & y c1 c2 [x1 d1 ... d (yx1)] ... [xk d1 ... d(y x k)] DEC : 27 38 y c1 c2 [x1 d1 ... d(yx1)] ...[xk d1 ... d(yxk)] HEX : 1B 26 y c1 c2 [x1 d1...d(y x1)]...[xk d1...d(yxk)]
Function	Define user customized characters. y specifies vertical direction bytes. c1 specifies the starting character encoding,c2 specifies the ending character encoding xk specifies horizontal direction dots.
Range	The range of x 、 y, are correspond with internal fonts. If choosing Font 6*12, y = 2, 0 ≤ x ≤ 6 If choosing Font 12*24, y= 3, 0 ≤ x ≤ 12 32 ≤ c1 ≤ c2 ≤ 126 0 ≤ d1 ... d(y*xk) ≤ 255
Default	None
Support Model	All
Notes	Definable character code range:from<20>H to <7E>H ASCII code(95 characters)。 It can define continuous characters encoding for several characters.When it need one character only,make c1=c2. d is character's dot data,dot mode starts from left side in the horizontal direction.It is blank for the rest dots in the right side. Defined user defines characters data is (y*x) byte. Set corresponding bit of printing dots as 1, or corresponding bit of no printing dots as 0. This command defines different customized characters for each type of font. Set font with ESC !. Customized characters and downlink bitmaps cannot be defined at the same time. When the command is executed, the downlink bitmap is cleared. User Customized characters will be cleared in these situations: Execute ESC @。 Execute GS *。 Execute ESC ?。 Printer reset or power off Graphic:

When set font A(12 24).

d1 = <0F>H d4 = <30>H d7 = <40>H
d2 = <03>H d5 = <80>H d8 = <40>H
d3 = <00>H d6 = <00>H d9 = <20>H

Example

①y = 2
1B 40
1b 26 02 20 20 06 FF FF FF FF FF FF FF FF FF FF FF
1b 25 01
20 20 0D 0A
1b 3f 20
30 20 30 20 0d 0a
②y = 3
1B 40
1b 26 03 20 20 06 FF FF FF FF FF FF FF FF FF FF FF FF FF
FF

	1b 25 01 20 20 0D 0A 1b 3f 20 30 20 30 20 0d 0a
--	--

Cancel user customized characters

Name	Cancel user customized characters
Code	ASCII : ESC ? n DEC : 27 63 n HEX : 1B 3F n
Function	Cancel user customized characters of specified code by n
Range	$32 \leq n \leq 126$
Default	None
Support Model	All
Notes	This command terminates the use of styles defined for character encoding, which is specified by n. After the user customized character is canceled, it is printed in the corresponding mode of the internal character. In the font selected with ESC !, the command removes the style defined for the specified encoding. If a user customized character is not defined, the printer ignores the command.
Example	None

Selecting international character set

Name	Selecting international character set																										
Code	ASCII : ESC R n DEC : 27 82 n HEX: 1B 52 n																										
Function	Selecting international character set n from the following table: <table> <tr> <th>n</th><th>Character</th></tr> <tr><td>0</td><td>U.S.A</td></tr> <tr><td>1</td><td>France</td></tr> <tr><td>2</td><td>Germany</td></tr> <tr><td>3</td><td>U.K</td></tr> <tr><td>4</td><td>Denmark I</td></tr> <tr><td>5</td><td>Sweden</td></tr> <tr><td>6</td><td>Italy</td></tr> <tr><td>7</td><td>Spain I</td></tr> <tr><td>8</td><td>Japan</td></tr> <tr><td>9</td><td>Norway</td></tr> <tr><td>10</td><td>Denmark II</td></tr> <tr><td>11</td><td>Spain II</td></tr> </table>	n	Character	0	U.S.A	1	France	2	Germany	3	U.K	4	Denmark I	5	Sweden	6	Italy	7	Spain I	8	Japan	9	Norway	10	Denmark II	11	Spain II
n	Character																										
0	U.S.A																										
1	France																										
2	Germany																										
3	U.K																										
4	Denmark I																										
5	Sweden																										
6	Italy																										
7	Spain I																										
8	Japan																										
9	Norway																										
10	Denmark II																										
11	Spain II																										

	12 Latin America 13 Korea 14 Slovenia 15 China
Range	$0 \leq n \leq 15$
Default	0
Support Model	All
Notes	None

③Graphic printing command

Fill Graphics vertical module data

Name	Fill Graphics vertical module data
Code	ASCII : ESC * m Hl Hh [d]k DEC : 27 42 m Hl Hh [d]k HEX : 1B 2A m Hl Hh [d]k
Function	Print vertical module graphic data,the parameters are as below: m is bit map format: m mode horizontal scale vertical scale 0 8dots single density ×2 ×3 1 8dots double density ×1 ×3 32 24dots single density ×2 ×1 33 24dots double density ×1 ×1 Hl、Hh is horizontal direction dots(Hl+256×Hh) [d]k is bit map data K used for indicating bit map data bytes,not for transfer.
Parameter range	XX58: $m = 0、1、32、33$ $1 \leq Hl + Hh \times 256 \leq 384$ $0 \leq d \leq 255$ $k = Hl + Hh \times 256$ (when $m = 0、1$) $k = (Hl + Hh \times 256) \times 3$ (when $m = 32、33$) XX80: $m = 0、1、32、33$ $1 \leq Hl + Hh \times 256 \leq 576$ $0 \leq d \leq 255$ $k = Hl + Hh \times 256$ (when $m = 0、1$) $k = (Hl + Hh \times 256) \times 3$ (when $m = 32、33$)
Default	None
Support Model	All
Notes	[d]k corresponding bit is 1,which means that this bit can print. While it is 0,it means that this bit can not print. The part of graphics horizontal direction which exceeds the printing area will be ignored. The relations between Bit map data and printing effects is as below: 8 dot bitmap data 24 dot bitmap data

	The command fills only the printing buffer, graphics printing can start only after receiving the printing commands. Printing buffer will be cleared after graphic printing. If you need to print higher graphics, you can divide it into several sections which has 8 (m = 0、1) or 24 (m = 32、33) dots graphics to print. After filling graphic data, you can continue to fill other information to make graphic and other information print simultaneously. After filling bitmap, you can use ESC J(n=24) command to print, and also can use LF command to print. But using LF command will cause paper feeding (feeding paper according to the line space), and make graphic continuous between different lines. And can set line space as 0 to avoid feeding too much. (Dot matrix printer may drift when it starts, pls send data continuously if occurs line broken.
Example	<pre>1B 40 1b 2a 00 0C 00 FF FF FF FF FF FF FF FF FF FF FF FF 1B 33 00 0A</pre>

Print Graphics horizontal module data

Name	Print Graphics horizontal module data																				
Code	ASCII : GS v 0 DEC : 29 118 48 m xL xH yL yH [d]k HEX : 1D 76 30 m xL xH yL yH [d]k																				
Function	Print horizontal module graphic data,the parameters are as below: m as bitmap method: <table><tr><td>m</td><td>Model</td><td>Horizontal scale</td><td>Vertical scale</td></tr><tr><td>0,48</td><td>Normal</td><td>× 1</td><td>× 1</td></tr><tr><td>1,49</td><td>Double-width</td><td>× 2</td><td>× 1</td></tr><tr><td>2,50</td><td>Double-height</td><td>× 1</td><td>× 2</td></tr><tr><td>3,51</td><td>Quadruple</td><td>× 2</td><td>× 2</td></tr></table> xL、xH were selected as the data bytes (xL+xH×256) in the horizontal direction for the bitmap. yL、yH were selected as the data bytes (yL+yH×256) in the vertical direction for the bitmap. [d]k for bitmap data	m	Model	Horizontal scale	Vertical scale	0,48	Normal	× 1	× 1	1,49	Double-width	× 2	× 1	2,50	Double-height	× 1	× 2	3,51	Quadruple	× 2	× 2
m	Model	Horizontal scale	Vertical scale																		
0,48	Normal	× 1	× 1																		
1,49	Double-width	× 2	× 1																		
2,50	Double-height	× 1	× 2																		
3,51	Quadruple	× 2	× 2																		

	k for bitmap data bytes, k used for indicating, not for transfer.																
Parameter range	XX58: 0 ≤ m ≤ 3; 48 ≤ m ≤ 51 1 ≤ xL + xH×256 ≤ 48 0 ≤ yL ≤255, 0 ≤ yH ≤255 0 ≤ d ≤ 255 k = (Hl + Hh×256)×(yL + yH×256) XX80: 0 ≤ m ≤ 3; 48 ≤ m ≤ 51 1≤ xL + xH×256 ≤ 72 0 ≤ yL ≤ 255, 0 ≤ yH ≤ 255 0 ≤ d ≤ 255 k = (Hl + Hh×256)×(yL + yH×256)																
Default	None																
Support Model	All																
Notes	[d] k corresponding bit is 1,which means that this bit can print. While it is 0,it means that this bit can not print. If the horizontal bytes exceed printing area, then the exceeding part will be ignored. The paper feeds accordingly to the image size when this commanding is using, not influenced by the setting of ESC 2, ESC 3 line space. After this command, the printing coordinates will be reset to the left margin and the image content will be cleared. the relationship between bitmap data and the printing effect is as below: <table><tr><td>d1</td><td>d2</td><td>.....</td><td>dx</td></tr><tr><td>d(x+1)</td><td>d(x+2)</td><td>.....</td><td>d(x+2)</td></tr><tr><td> </td><td> </td><td>.....</td><td> </td></tr><tr><td>.....</td><td>d(k-2)</td><td>d(k-1)</td><td>dk</td></tr></table> MSB LSB MSB LSB MSB LSB MSB LSB This command has the printing function, data will be transferred while printing, no need to use the printing command again	d1	d2		dx	d(x+1)	d(x+2)		d(x+2)						d(k-2)	d(k-1)	dk
d1	d2		dx														
d(x+1)	d(x+2)		d(x+2)														
																	
.....	d(k-2)	d(k-1)	dk														
Example	1B 40 1d 76 30 00 03 00 09 00 FF																

Define downloaded bitmap

Name	Define downloaded bitmap
Code	ASCII : GS * x y d1...d(x*y*8)

	DEC : 29 42 x y d1 ...d(x*y*8) HEX : 1D 2A x y d1...d(x*y*8)
Function	using x and y to appoint dots to define the downloaded bitmap x appoints that the horizontal dots as 8*x. y appoints that the vertical dots as 8*y.
Parameter range	$1 \leq x \leq 255$ $1 \leq y \leq 48$ $x*y \leq 1536$ $0 \leq d \leq 255$
Default	None
Support Model	All
Notes	If x*y is out of the specified range, this command will be forbidden. The d indicates bitmap data. Data (d) specifies the printing bit as 1 and the not printing bit as 0. The downloaded bitmap definition will be cleared when: ESC @ is executed. ESC & is executed. Printer is reset or the power is turned off. The following figure shows the relationship between the downloaded bitmap and the printed data 
Example	1B 40 1D 2A 03 03 FF

	FF 1D 2F 00
--	--

Print downloaded bitmap

Name	Print downloaded bitmap										
Code	ASCII : GS / m DEC : 29 47 m HEX : 1D 2F m										
Function	Prints a downloaded bitmap using the mode specified by m. Using the mode that m appointed to print downloaded bitmap <table border="1"> <thead> <tr> <th>m</th><th>Model</th></tr> </thead> <tbody> <tr> <td>0, 48</td><td>Normal</td></tr> <tr> <td>1, 49</td><td>Double-width</td></tr> <tr> <td>2, 50</td><td>Double-height</td></tr> <tr> <td>3, 51</td><td>Quadruple</td></tr> </tbody> </table>	m	Model	0, 48	Normal	1, 49	Double-width	2, 50	Double-height	3, 51	Quadruple
m	Model										
0, 48	Normal										
1, 49	Double-width										
2, 50	Double-height										
3, 51	Quadruple										
Parameter range	$0 \leq m \leq 3$ $48 \leq m \leq 51$										
Default	None										
Support Model	All										
Notes	this command will be ignored if the bitmap data has not been defined. In standard mode, this command is effective only when there is no data in the buffer area. This command has no effect in the print modes (emphasized, double-strike, downloadedline, character size, or white/black reverse printing), except for upsidedown printing mode. If the downloaded bitmap which will be printed exceeds the printing area, then the excess data will not be printed.										
Example	No										

Define NV bitmap

Name	Define NV bitmap
Code	ASCII : FS q n [xL xH yL yH d1...dk]1...[xL xH yL yH d1...dk]n DEC : 28 113 n [xL xH yL yH d1...dk]1...[xL xH yL yH d1...dk]n HEX : 1C 71 n [xL xH yL yH d1...dk]1...[xL xH yL yH d1...dk]n
Function	Define the NV bitmap using the specified n. n specifies the number of the defined NV bitmap. xL, xH means that the defined NV bitmap specifies the horizontal dots as $(xL+xH*256)*8$

	yL, yH means that the defined NV bitmap specifies the vertical dots as $(yL + yH \times 256) \times 8$
Parameter range	$1 \leq n \leq 255$ $0 \leq xL \leq 255$ $0 \leq xH \leq 3$ $(1 \leq (xL + xH \times 256) \leq 1023)$ $0 \leq yL \leq 255$ $0 \leq yH \leq 1$ $(1 \leq (yL + yH \times 256) \leq 288)$ $0 \leq d \leq 255$ $k = (xL + xH \times 256) \times (yL + yH \times 256) \times 8$ Totaled the defined data Area = 64 k bytes
Default	None
Support Model	All
Notes	Frequent writing command executions may damage the NV memory. Therefore, it is recommended to write the NV memory no more than 10 times per day. The printer performs a hardware reset operation after the procedure of placing the image into the NV memory. Therefore, user-defined characters, downloaded bitmaps should be defined only after completing this command. The printer clears the receiving and printing buffers and resets the printer to the mode that workable when power on. (hardware reset interface is not supported) This command cancels all NV bitmaps that have already been defined by this command. From the beginning of the processing of this command till the accomplishment of hardware reset, mechanical operations (including initializing the position of the print head when the cover is open, paper feeding using the FEED button, etc.) cannot be performed. During this command processing, the printer is busy and stops receiving data when writing data to the user's NV memory. Therefore, data transmission, including real-time commands, is prohibited during the execution of this command. NV bitmap is a bitmap defined in non-volatile memory, Define FS p printing with FS q. In standard mode, this command is valid only when processed at the beginning of the line. This command is valid when 7 bytes <FS yH> of the command are processed normally. When the data volume exceeds the left capacity of the range

defined by xL, xH, yL, and yH, the printer will process the range defined by xL, xH, yL, and yH outside the defined range.

In the first group of NV bitmaps, when any one of xL, xH, yL, yH is out of the definition range, this command is disabled.

In groups of NV bitmaps other than the first group, when xL, xH, yL, yH out of the defined range, it stops processing this command and starts writing into the NV images. At this time, NV bitmaps that haven't been defined are disabled (undefined), but any NV bitmaps before that are enabled.

The d indicates the definition data. In data (d) a 1 bit specifies a dot to be printed and a 0 bit specifies a dot not to be printed.

This command defines n as the number of a NV bitmap. Numbers rise in order from NV bitmap 01H. Therefore, the first data group [xL xH yL yH d1...dk] is NV bitmap 01H, and the last data group [xL xH yL yH d1...dk] is NV bitmap n. The total agrees with the number of NV bitmaps specified by the command FS p.

The definition data for an NV bitmap consists of [xL xH yL yH d1...dk]. Therefore, when only one NV bitmap is defined n=1, the printer processes a data group [xL xH yL yH d1...dk] once. The printer uses ([data: (xL xH× 256)×(yL yH× 256)×8] [header :4]) bytes of NV memory.

The definition area in this printer is a maximum of 192K bytes. This command can define several NV bitmaps, but cannot define bitmap data whose total capacity [bitmap data header] exceeds 192K bytes.

The printer does not transmit ASB status or perform status detection during processing of this command even when ASB is specified.

Once an NV bitmap is defined, it is not erased by performing ESC @, reset, and power off.

This command performs only definition of an NV bitmap and does not perform printing. Printing of the NV bitmap is performed by the FS pcommand.

Diagram: when xL = 64, xH = 0, yL = 96, yH = 0

Example	<pre> 1B 40 1C 71 01 03 00 03 00 FF 1C 70 01 00 </pre>

Print NV bitmap

Name	Print NV bitmap
Code	ASCII : FS p n m
	DEC : 28 112 n m
	HEX : 1C 70 n m

Function	Print NV bitmap n using the mode specified by m.	
	m	Mode
	0, 48	Normal
	1, 49	Double-width
	2, 50	Double-height
	3, 51	Quadruple
Parameter range	$0 \leq m \leq 3$ $48 \leq m \leq 51$ $1 \leq n \leq 255$	
Default	None	
Support	All	
Notes	n is the number of the NV bitmap (defined using the FS q command). m specifies the bitmap mode. NV bitmap is a bitmap defined in non-volatile memory by FS q and printed by FS p. This command is not effective when the specified NV bitmap has not been defined. In standard mode, this command is effective only when there is no data in the print buffer. This command is not affected by print modes (Bold printing, overlapping, underline, character size, white/black reverse printing, or 90° rotated characters, etc.), except upside-down printing mode. If the downloaded bit-image to be printed exceeds one line, the excess data is not printed. This command feeds dots (for the height n of the NV bitmap) in normal and double-width modes, and (for the height n 2 of the NV bitmap) in double height and quadruple modes, regardless of the line space specified by ESC 2 or ESC 3. After printing the bitmap, this command sets the print position to the beginning of the line and processes the data that follows as normal data.	
Example	None	

④Print bitmap

Horizontal tab

Name	Horizontal tab
Code	ASCII : HT DEC : 9 HEX : 09

FUNCTION	Move the print position to the next tab position
Parameter range	None
Defaults	None
Support	All
Notes	Tab position set by ESC D If the tab position is not set(the default is no horizontal position),this command will be treated as an LF command If the tab position exceeds the print area,the coordinates will move to the star position of the next line(as the data is full,print and wrap)
Example	none

Horizontal tab position setting

Name	horizontal tab position setting
Code	ASCII : ESC D [d]k NUL DEC : 27 68 [d]k 0 HEX : 1B 44 [d]k 00
Function	Set horizontal tab position, parameter meaning as below: d1 ... dk: horizontal position,in 8 as unit,null as the terminator
Parameter range	XX58: $1 \leq d \leq 46$ ($d_1 < d_2 < \dots < d_k$, $1 \leq k \leq 16$) XX80: $1 \leq d \leq 70$ ($d_1 < d_2 < \dots < d_k$, $1 \leq k \leq 16$)
Defaults	The default positioning position is the 8-character interval(Column 9 17 25...) of the font A(12-24)
Support model	All
Notes	Tab position as below:  Maximum support for the setting of 16 tab position Using this command,the setting of previous tab position will be canceled k is for indication purpose,no transmission When transport [d]k,and come across NULL,should be considered over If dk less than or equal to dk-1,should be considered over,and balance data is treated as normal data processing TAB position could be changed by HT command

	When the left margin changes, the TAB position changes simultaneously The command setting will be valid after ESC @、printer reset、power off
Example	1B 44 04 06 08 0A 00 09 30 09 31 09 32 09 33 0D 0A

⑤ One-dimension bar code command

D bar code readable character(HRI) print position setting

Name	1D bar code readable character(HRI)print position setting
Code	ASCII : GS H n DEC : 29 72 n HEX : 1D 48 n
Function	Set 1D bar code readable character(HRI)print position,n parameter meaning as below: n print position 0, 48 don't print 1, 49 above the bar code 2, 50 below the bar code 3, 51 above and below the bar code
Parameter range	$0 \leq n \leq 3$ or $48 \leq n \leq 51$
Defaults	n = 0
Support model	All
Notes	The command setting will be valid after ESC @、printer reset、power off
Example	None

1D bar code height setting

Name	1D bar code height setting
Code	ASCII : GS h n DEC : 29 104 n DEX : 1D 68 n
Function	Parameter n specifies the height of a bar code in dots:  Height 50  Height 100
Parameter range	$1 \leq n \leq 255$
Defaults	n = 64
Support	All

Notes	The command setting will be valid after ESC @、printer reset、power off
Example	None

1D bar code width setting

Name	1D bar code width setting
Code	ASCII : GS w n DEC : 29 119 n HEX : 1D 77 n
Function	Parameter n specifies the unit of a bar code in dots:  Width 3  Width 4
Parameter range	$1 \leq n \leq 6$
Defaults	$n = 2$
Support	All
Noted	The command setting will be valid after ESC @、printer reset、power off
Example	None

1D bar code printing

Name	1D bar code printing															
Code	(A) ASCII : GS k m [d]k NUL DEC : 29 107 m [d]k NUL Hex : 1D 6B m [d]k NUL (B) ASCII : GS k m n [d]k DEC : 29 107 m n [d]k Hex : 1D 6B m n [d]k															
Function	1D bar code printing,the parameters meaning as below: m is encoding n is code data length,only for (command B),the difference between (A) and (B)is that the data (A) end with NULL,but (B) indicates the data length [d]k is bar code data K is the length of the bar code data,for sign,no transmission Parameters relationship as below: (Command A) <table><tr><td rowspan="2">m</td><td rowspan="2">Coding system</td><td colspan="4">Bar code length (SP show space)</td></tr><tr><td>Data</td><td>k</td><td>Character set</td><td>Data (d)</td></tr></table>						m	Coding system	Bar code length (SP show space)				Data	k	Character set	Data (d)

	74	UCC/EAN128	changeable	$1 \leq n \leq 255$	00H~7FH C1H~C4H(FNC)	$0 \leq d \leq 127$ $d = 193$, 194,195,196
Parameter range	(A) $0 \leq m \leq 6$ (B) $65 \leq m \leq 74$					
Defaults	None					
Support	All					
Notes	If the bar code width exceed the printable area,the printer does not perform barcode printing Paper feed as needed when the command is carried out,that not affected by ESC2,ESC3 line space settings,and do not influence line space settings The command is not affected by ESC !character style setting The print position is resorted to the print start location after the command is executed m parameter 0 ~ 6(A) and 65 ~ 71(B) select the same coding system,the same printing effect					

m parameter is 0 ~ 6(A),barcode data end with NULL

m parameter is 65 ~ 74(B),barcode data n stand for data length

K is for sign,no transmission

When print UPCA (m = 0 or 65) ,Please pay attention for the following points:

Whatever the input data length is 11 or 12,the check bit is automatically inserted or corrected

Initial character,central split character,and terminator are inserted automatically

When print UPCE (m = 1 or 66) ,Please pay attention as following:

The system character (NSC) 0 will be inserted automatically when data

length is 6

The first system character (NSC) d1 must be 0 when the data length is 7,8,11 and 12.

Whatever the data length is 6,7,8,11 and 12,the check bit inserted or corrected automatically

Whatever the input data length is 6,7,8,11,and 12,the barcode readable character(HRI) just show 6 as data,but excluded system character (NSC) and check code;

The transition relation between transmission and printing data as below:

Transmitted data										Printed data					
d2	d3	d4	d5	d6	d7	d8	d9	d10	d11	d1	d2	d3	d4	d5	d6
0~9	0~9	0	0	0	-	-	0~9	0~9	0~9	d2	d3	d9	d10	d11	0
0~9	0~9	1	0	0	-	-	0~9	0~9	0~9	d2	d3	d9	d10	d11	1
0~9	0~9	2	0	0	-	-	0~9	0~9	0~9	d2	d3	d9	d10	d11	2
0~9	0~9	3~9	0	0	-	-	-	0~9	0~9	d2	d3	d4	d10	d11	3
0~9	0~9	0~9	1~9	0	-	-	-	-	0~9	d2	d3	d4	d5	d11	4
0~9	0~9	0~9	0~9	1~9	-	-	-	-	5~9	d2	d3	d4	d5	d6	d11

When d6 is 1~9,be sure d7,d8,d9,d10 are 0,and d11 is 5~9

Initial character,terminator automatically inserted

When print EAN13(m = 2 or 67),Please pay attention as following:

Whatever the input data length is 12 or 13,check bit is automatically inserted or corrected

Initial character,central split character and terminator inserted automatically

When print EAN8(m = 3 or 68),please pay attention as following:

Whatever input data length is 7 or 8,the check bit is automatically inserted or corrected

Initial character,central split character and terminator inserted

automatically

When print CODE39(m = 4 or 69),please pay attention as following:

When d1 or dn are not Initial character/terminator "*", encoder is automatically inserted "**"

When middle of the data encounter "*", the encoder regard it as terminator, the other data as the normal data;

The check bit could not calculate and add automatically

When print ITF25(m = 5 or 70), please pay attention as following:

Initial character and terminator inserted automatically

The check bit could not calculate and add automatically

When print CODABAR (NW-7) (m = 6 or 71),please pay attention as following:

Initial character and terminator could not inserted automatically,but manual addition by user, that the range from "A"~"D" or "a"~"d"

Check bit could not calculate and add automatically

When print CODE93(m = 72),please pay attention as following:

Initial character and terminator inserted automatically

The two check code are automatically calculated and then inserted

When barcode readable character(HRI) is set to print, there is no HRI character which indicating start/end

When barcode readable character(HRI) is set to print,the control character will be replaced with space

When print CODE128(m = 73),please pay attention as following:

The encoding system intelligently identifies data and implements minimum length encoding without the user set character (include starting character set) or switch character

Function character FNC1~FNC4 use C1H~C4H and input it

The check bit could calculate and add automatically

When barcode readable character(HRI) is set to print,the control character and FNC1~FNC4 will be replaced with space

When print EAN128(m = 74),please pay attention as following:

Basic construction as below:

Initial character set	FNC1	AI	Data part	Check bit A	Check bit B	Terminator
Inserted automatically		(d1...dk)			Inserted automatically	

Connection structure as below:

Initial character	FNC1	AI	Data part	Check bit A	FNC1	AI	Data part	Check bit A	Check bit B	Terminator
-------------------	------	----	-----------	-------------	------	----	-----------	-------------	-------------	------------

	r set									
	Inserted automatically	(d1...dk)							Inserted automatically	
	The encoding system intelligently identifies data and implements minimum length encoding without the user set character (include starting character set) or switch character Function character FNC1~FNC4 use C1H~C4H and input it User input data AI,which do not need “(”)” for indication,encoding system inserted automatically,otherwise it will be wrong.For example,GS k 74 18 "019501234567890*", 01 is AI,the following will be wrong:GS k 74 18 "(01)9501234567890*" When user use the connection structure,need to insert FNC1(C1H"Decimal=193") in the middle.The input example as following: GS k 74 18 "019501234567890*" 193 "029501234567890*" When barcode readable character(HRI) is set to print,the control character will be replaced with space,then cancel FNC1~FNC4									
Example	1b 40 1d 48 02 1d 6b 41 0c 31 32 33 34 35 36 37 38 39 30 31 32 1d 6b 42 0c 30 32 33 34 35 36 30 30 30 30 38 39 1d 6b 43 0c 30 32 33 34 35 36 30 30 30 30 38 39 1d 6b 44 08 30 32 33 34 35 36 30 30 1d 6b 45 08 30 32 33 34 35 36 30 30 1d 6b 46 08 30 32 33 34 35 36 30 30 1d 6b 47 08 41 32 33 34 35 36 30 41 1d 6b 48 08 41 30 32 33 34 35 36 41 1d 6b 49 08 41 30 32 33 34 35 36 41									

⑥Status querying Commands

Transmission status

Name	Transmission status					
Code	ASCII : GS r n DEC : 29 114 n HEX : 1D 72 n					
Function	Transmits the status specified by n as follows: <table><tr><th>n</th><th>Function</th></tr><tr><td>1, 49</td><td>Transmits paper sensor status</td></tr></table>		n	Function	1, 49	Transmits paper sensor status
n	Function					
1, 49	Transmits paper sensor status					
Range	n = 1, 49					
Default	None					

Notes

When using a serial interface

When DTR/DSR control is selected, the printer transmits only 1 byte after confirming the host is ready to receive data (DSR signal is SPACE). If the host computer is not ready to receive data (DSR signal is MARK), the printer will wait until the host is ready.

When XON/XOFF control is selected, the printer transmits only 1 byte without confirming the status of the DSR signal.

This command is executed when data is generated in the print buffer. Therefore, there may be a time interval between receiving the command and sending status, depending on the status of the receiving buffer.

When Auto Status Back (ASB) is enabled using GS a, the status transmitted by GS r and the ASB status must be differentiated using.

The status types to be transmitted are shown as below:

Bit	Off/On	Hex	Decima l	Status for ASB
0,1	-	-	-	Undefined.
2,3	Off	00	0	Paperend sensor: paper adequate.
	On	(0C)	(12)	Paperend sensor: paper near end.
4	Off	00	0	unused. fixed to be Off.
5,6	-	-	-	Undefined.
7	Off	00	0	unused. fixed to be Off.

Paper sensor status (n = 1, 49):

Bits 2 and 3: When the paper end sensor detects the paper end, the printer goes offline and does not execute this command. Therefore, bits 2 and 3 do not transmit the status of paper end.

Example

None

Real-time transmission status

Name	Real-time transmission status
Code	ASCII : DLE EOT n DEC : 16 4 n

	HEX : 10 04 n																																																
Function	According to below parameters, transit the real-time status of printer,n stands for printer status: N=1:transmit printer status N=2:transmit off-line status N=3:transmit error status N=4:transmit paper sensor status																																																
Range	1 ≤ n ≤ 4																																																
Default	None																																																
Support	All																																																
Notes	•Printer return to the relative status immediately after receiving the command • this command try not to put in command list between 2 or more bite . Though printer being forbid by ESC=,this command still effective. Printer transmit current situation ,each situation show by 1 bite data. It is not sure host computer will receive printer transmit situation. Printer executed immediately after received the command. The command only effective for serial printer.Printer start to work immediately after receiving this command at any situation. n=1: printer status <table><tr><th>Bit</th><th>0/1</th><th>Hexadecimal</th><th>decimalis m</th><th>Function</th></tr><tr><td>0</td><td>0</td><td>00</td><td>0</td><td>Fixed to be 0</td></tr><tr><td>1</td><td>1</td><td>02</td><td>2</td><td>Fixed to be 1</td></tr><tr><td rowspan="2">2</td><td>0</td><td>00</td><td>0</td><td>Two drawers kick(no drawer, fixed to be 0)</td></tr><tr><td>1</td><td>04</td><td>4</td><td>Turn off two cashbox</td></tr><tr><td rowspan="2">3</td><td>0</td><td>00</td><td>0</td><td>On-line</td></tr><tr><td>1</td><td>08</td><td>8</td><td>Off-line</td></tr><tr><td>4</td><td>1</td><td>10</td><td>16</td><td>Fixed to be 1</td></tr><tr><td>5,6</td><td></td><td>--</td><td>--</td><td>undefined</td></tr><tr><td>7</td><td>0</td><td>00</td><td>00</td><td>The paper has been torn away</td></tr></table>	Bit	0/1	Hexadecimal	decimalis m	Function	0	0	00	0	Fixed to be 0	1	1	02	2	Fixed to be 1	2	0	00	0	Two drawers kick(no drawer, fixed to be 0)	1	04	4	Turn off two cashbox	3	0	00	0	On-line	1	08	8	Off-line	4	1	10	16	Fixed to be 1	5,6		--	--	undefined	7	0	00	00	The paper has been torn away
Bit	0/1	Hexadecimal	decimalis m	Function																																													
0	0	00	0	Fixed to be 0																																													
1	1	02	2	Fixed to be 1																																													
2	0	00	0	Two drawers kick(no drawer, fixed to be 0)																																													
	1	04	4	Turn off two cashbox																																													
3	0	00	0	On-line																																													
	1	08	8	Off-line																																													
4	1	10	16	Fixed to be 1																																													
5,6		--	--	undefined																																													
7	0	00	00	The paper has been torn away																																													

		1	80	96	The paper hasn't been torn away
	n=2: transit off-line status				
	bite	0	Hexadecim	decimalism	Function
		/	al		
		1			
	0	0	00	0	Fixed to be 0
	1	1	02	2	Fixed to be 1
	2	0	00	0	Turn off upper cover
		1	04	4	Open upper cover
	3	0	00	0	Not press feed key
		1	08	8	press feed key
	4	1	10	16	Fixed to be 1
	5	0	00	0	Paper adequate
		1	20	32	Paper shortage
	6	0	00	00	No error

	10 04 02				
	10 04 03				
	10 04 04				

⑦Printing QR code

Mode type of 2-D bar code

Name	Mode type of 2-D bar code
Code	ASCII : GS (k pL pH cn fn n Decimal : 29 40 107 pL pH cn fn n Hexadecimal : 1D 28 6b pL pH cn fn n
Function	Setting mode type of two-dimension bar code to [n dot × n dot].
Parameter	pL=3, pH=0

range	cn=49 fn=67 $0 \leq n \leq 16$
Default	n=3
Support model	All
Notes	Setting mode type of QR code to [n dot × n dot].
Example	None

Setting error correction level of 2-D bar code

Name	Setting error correction level of 2-D bar code		
Code	ASCII : GS (k pL pH cn fn n DEC : 29 40 107 pL pH cn fn n HEX : 1D 28 6b pL pH cn fn n		
Function	Setting error correction level of two-dimension bar code		
Parameter range	pL=3, pH=0 cn=49 fn=69 48 ≤ n ≤ 51		
Default	n=48		
Support model	All		
Notes	Setting error correction level of two-dimension bar code		
	n	Function	Approximate Amount of correction
	4 8	Error correction level (L)	7%
	4 9	Error correction level (M)	15%
	5 0	Error correction level(Q)	25%
	5 1	Error correction level (H)	30%
Example	None		

Store 2-D bar code data to data buffer

Name	Store two-dimension bar code data to data buffer		
Code	ASCII : GS (k pL pH cn fn m d1...dk DEC : 29 40 107 pL pH cn fn m d1...dk		

	HEX : 1D 28 6b pL pH cn fn m d1...dk
Function	Store two-dimension bar code data to data buffer
Parameter range	$4 \leq (pL + pH \times 256) \leq 7092$ ($0 \leq pL \leq 255, 0 \leq pH \leq 28$) cn=49 fn=80 m=48 $0 \leq d \leq 255$ $k = (pL + pH \times 256) - 3$
Default	No
Support model	All
Notes	Store two-dimension bar code data (d1...dk) to data buffer. ((pL + pH×256) - 3) bytes is processed as a graphic data after the m (d1...dk).
Example	None

Printing two-dimension bar code

Name	Printing two-dimension bar code
Code	ASCII : GS (k pL pH cn fn m DEC : 29 40 107 pL pH cn fn m HEX : 1D 28 6b pL pH cn fn m
Function	Printing QR code
Parameter range	pL=3, pH=0 cn=49 fn=81 m=48
Default	None
Support model	All
Notes	Printing two-dimension bar code. Users must consider two-dimension bar code graph space. (The space of up and down, left and right of two-dimension bar code graph is specified in the specification.)
Example	1b 40 1d 28 6b 03 00 31 43 03 1d 28 6b 03 00 31 45 30 1d 28 6b 06 00 31 50 30 41 42 43 1b 61 01 1d 28 6b 03 00 31 52 30 1d 28 6b 03 00 31 51 30

Setting two-dimension bar code graph information

Name	Setting two-dimension bar code graph information			
Code	ASCII : GS (k pL pH cn fn m DEC : 29 40 107 pL pH cn fn m HEX : 1D 28 6b pL pH cn fn m			
Function	Setting two-dimension bar code graph information			
	The detailed graph information is as follows:			
	Transmit data	Hexadecimal	Decimal	Data type
	Header	37H	55	1byte
	Flag	36H	54	1byte
	Width	30H-39H	48-57	1-5byte
	Separator	1FH	31	1byte
	Height	30H-39H	48-57	1-5byte
	Separator	1FH	31	1byte
	Fixed Value	31H	49	1byte
	Separator	1FH	31	1byte
	Other Information	30H or 31H	48 or 49	1byte
	NUL	00H	0	1byte
	and H data transmit graph: use dot for unit.			
Other information data transmit:				
“Hexadecimal=30H/Decimal=48”: Data is not printed.				
“Hexadecimal=31H/Decimal=49”: Data is not printed.				
Parameter range	pL=3, pH=0 cn=49 fn=82 m=48			
Default	None			
Support model	All			
Notes	This command do not print two-dimension bar code graph. Users must consider two-dimension bar code graph space.			
Example	None			

Printing two dimensional code

Name	Printing two dimensional code
Code	ASCII : GS k m v r nL nH d1...dk DEC : 29 107 97 v r nL nH d1...dk HEX : 1D 6B 61 v r nL nH d1...dk

Function	Printing two dimensional code. v: describes two dimensional code specification v=0: describes automatically select two dimensional code specification r: describes error correction rank nL nH: describes data length d1...dk: describes two dimensional code to be printed
Parameter range	$0 \leq v \leq 17$ $1 \leq r \leq 4$ $k = nL + 256 * nH$
Default	None
Notes	Printing QR code.
Example	1b 40 1D 6B 61 08 02 08 00 30 31 32 33 34 35 36 37

Printing double Two-dimension bar code

Name	Printing double two-dimension bar code
Code	ASCII : US Q m n p1H p1L l1H l1L ecc1 v1 d1...dn p2H p2L l2H l2L ecc2 v2 dk...dm DEC : 27 81 m n p1H p1L l1H l1L ecc1 v1 d1...dn p2H p2L l2H l2L ecc2 v2 dk...dm HEX : 1F 51 m n p1H p1L l1H l1L ecc1 v1 d1...dn p2H p2L l2H l2L ecc2 v2 dk...dm
Function	Printing double two-dimension bar code
Range	QR code numbers: 0<m>3 QR code size: n(1~8) P1H,p1L specify the location of QR1: (p1H*256+p1L) L1H,l1L specify the data length of QR1: (l1H*256+l1L) Ecc1 specify error correction level about QR1 : (0:7%, 1:15%,2:25%,3:30%) V1 specify QR1 version of the symbol.(1~40, 0:auto size) D1...d2 as the data of QR1; P2H,p2L specify the location of QR2: (p2H*256+p2L) L2H,l2L specify the data length of QR2: (l2H*256+l2L) Ecc2 specify error correction level about QR2 : (0:7%, 1:15%,2:25%,3:30%) V2 specify QR2 version of the symbol.(1~40, 0:auto size) Dk...dm as the data of QR2
Default	None
Notes	If module size is bigger than printing width, the QR data will be treated as normal data
Example	To Print string "0123456789" in QR Code at position 32 with ecc 1and Print string "987654321" in QR Code at position 192 with ecc 2, and module size 3, you should send command as follow。

	1f 51 02 03 00 20 00 0a 01 06 30 31 32 33 34 35 36 37 38 39 00 C0 00 0a 02 00 39 38 37 36 35 34 33 32 31 30
--	---

⑧Other commands

Printer reset

Name	Printer reset
Code	ASCII : ESC @ Decimal : 27 64 Hex : 1B 40
Function	The ESC @ command initializes the printer as following: This command prints the data contained in the print buffer, and initializes various setup items. Restore default values for each parameter
Range	None
Default value	None
Support model	All
Notes	None
Example	None

Print self-test page

Name	Print self-test page
Code	ASCII : DC2 T Decimal : 18 84 Hex : 12 54
Function	Printing a self-test page which including firmware version,interface,codepage and other some information
Range	None
Default value	None
Support model	All
Notes	None
Example	1B 40 12 54

Feed to the beginning of the next label

Name	Feed to the beginning of the next label
Code	ASCII : SO Decimal : 14 Hex : 0E

Function	Feed to the beginning of the next label
Range	None
Default value	None
Notes	Only feed to the next label
Example	None

Setting up paper type

Name	Setting up paper type
Code	ASCII : US A n Decimal : 31 65 n Hex : 1F 41 n
Function	Setting up paper type n=0, Thermal paper n=1, label paper
Range	None
Default value	None
Notes	None
Example	None
